- 1) A method with the features of the preamble is known from D1: US-A-3 073 388.

The problem may be regarded as how to provide a better control of the cutter.

This problem is solved in the known method with the features described in the characterising part of claim 1. In particular it is not known from the searched prior art documents how to set a timer depending on parameters. D1 discloses a timer which is set with a rod.

The same problem and solution applies for the apparatus claim 10 which include the same features in the characterising part.

Therefore, the skilled person had no incentive to include such feature in the known method in order to solve the problem posed. Consequently, the subject-matter of claims 1 and 10 meets the requirements of Art. 33(2)-(4) PCT.

- 2) Claims 2-9 and 11-14 are dependant from 1 and 10 respectively and define preferred embodiments. They also meet the requirements of Article 33(2)-(3).
